

SELECT within SELECT Tutorial

Language:	English • 日本語 • 中文
------------------	---------------------------

This tutorial looks at how we can use SELECT statements within SELECT statements to perform more complex queries.

name	continent	area	population	gdp
Afghanistan	Asia	652230	25500100	20343000000
Albania	Europe	28748	2831741	12960000000
Algeria	Africa	2381741	37100000	188681000000
Andorra	Europe	468	78115	3712000000
Angola	Africa	1246700	20609294	100990000000
...				

Using nested SELECT

Summary

Contents

- 1 Bigger than Russia
- 2 Richer than UK
- 3 Neighbours of Argentina and Australia
- 4 Between Canada and Poland
- 5 Percentages of Germany
- 6 Bigger than every country in Europe
- 7 Largest in each continent
- 8 First country of each continent (alphabetically)
- 9 Difficult Questions That Utilize Techniques Not Covered In Prior Sections
- 10 Three time bigger

Bigger than Russia

1.

List each country name where the population is larger than that of 'Russia'.

```
world(name, continent, area, population, gdp)
```

```
SELECT name FROM world
WHERE population >
  (SELECT population FROM world
   WHERE name='Russia')
```

Submit SQL[restore default](#)

Correct answer

name
Bangladesh
Brazil
China
India
Indonesia
Nigeria
Pakistan
United States

sqlzoo select in select 1

Richer than UK

2.

Show the countries in Europe with a per capita GDP greater than 'United Kingdom'.

Per Capita GDP

```
select name from world
where continent = 'Europe'
  and (gdp / population) > (
    select (gdp / population)
    from world
    where name = 'United Kingdom');
```

Submit SQL

restore default

Denmark
Finland
Germany
Iceland

sqlzoo select in select 2

Neighbours of Argentina and Australia

3.

List the name and continent of countries in the continents containing either Argentina or Australia. Order by name of the country.

```
select name, continent from world
where continent in (
  select continent
  from world
  where name in ('Argentina', 'Australia'))
order by name;
```

Submit SQL[restore default](#)

Correct answer

name	continent
Argentina	South America
Australia	Insular Oceania
Bolivia	South America
Brazil	South America
Chile	South America
Colombia	South America
Ecuador	South America
Peru	South America
Venezuela	South America

Between Canada and Poland

4.

Which country has a population that is more than United Kingdom but less than Germany? Show the name and the population.

```
select name, population from world
where population > (
    select population from world
    where name = 'United Kingdom')
and population < (select population from world
where name = 'Germany');
```

[Submit SQL](#)[restore default](#)

Correct answer

name	population
France	68128000
Thailand	68263022

Percentages of Germany

5.

Germany (population roughly 80 million) has the largest population of the countries in Europe. Austria (population 8.5 million) has 11% of the population of Germany.

Show the name and the population of each country in Europe. Show the population as a percentage of the population of Germany.

The format should be *Name, Percentage* for example:

name	percentage
------	------------

Albania	3%
Andorra	0%
Austria	11%
...	...

Decimal places

Percent symbol %

```
select name,  
  concat(round(population * 100/(select population from world  
    where name = 'Germany'), 0), '%') as percentage  
from world  
where continent = 'Europe'
```

Submit SQL

restore default

Correct answer

name	percentage
Albania	3%
Andorra	0%
Austria	11%
Belarus	12%
Belgium	14%
Bosnia and Herzegovina	5%
Bulgaria	9%
Croatia	5%

sqlzoo select in select 5

To get a well rounded view of the important features of SQL you should move on to the next tutorial concerning aggregates.

To gain an absurdly detailed view of one insignificant feature of the language, read on.

We can use the word **ALL** to allow **>=** or **>** or **<** or **<=** to act over a list. For example, you can find the largest country in the world, by population with this query:

```
SELECT name
FROM world
WHERE population >= ALL(SELECT population
                        FROM world
                        WHERE population>0)
```

You need the condition **population>0** in the sub-query as some countries have **null** for population.

Bigger than every country in Europe

6.

Which countries have a GDP greater than every country in Europe? [Give the name only.] (Some countries may have NULL gdp values)

```
select name from world
where gdp > all (select gdp from world where continent = 'Europe' and gdp is not null);
```

[Submit SQL](#)[restore default](#)

Correct answer

name
China
Japan
United States

We can refer to values in the outer SELECT within the inner SELECT. We can name the tables so that we can tell the difference between the inner and outer versions.

Largest in each continent

7.

Find the largest country (by area) in each continent, show the continent, the name and the area:

The above example is known as a **correlated** or **synchronized** sub-query.

Using correlated subqueries

```
SELECT
  w1.continent,
  w1.name,
  w1.area
FROM world AS w1
WHERE w1.area = (
  SELECT MAX(w2.area)
  FROM world AS w2
  WHERE w2.continent = w1.continent
```

[Submit SQL](#)[restore default](#)

Correct answer

continent	name	area
Africa	Algeria	2381741
Oceania	Australia	7692024
South America	Brazil	8515767
North America	Canada	9984670
Asia	China	9596961
Caribbean	Cuba	109884
Europe	Kazakhstan	2724900
Eurasia	Russia	17125242

First country of each continent (alphabetically)

8.

List each continent and the name of the country that comes first alphabetically.

```
select continent, min(name)
from world
group by continent;
```

[Submit SQL](#)[restore default](#)

Correct answer

continent	min(name)
Africa	Algeria
Asia	Afghanistan
Caribbean	Antigua and Barbuda
Eurasia	Armenia
Europe	Albania
North America	Belize
Oceania	Australia
South America	Argentina

Difficult Questions That Utilize Techniques Not Covered In Prior Sections

9.

Find the continents where all countries have a population ≤ 25000000 . Then find the names of the countries associated with these continents. Show name, continent and population.

```
select name, continent, population
from world
where continent in (select continent from world group by continent having max(population)
<= 25000000);
```

[Submit SQL](#)[restore default](#)

Correct answer

name	continent	population
Antigua and Barbuda	Caribbean	86295
Australia	Oceania	23545500
Bahamas	Caribbean	351461
Barbados	Caribbean	285000
Cuba	Caribbean	11167325
Dominica	Caribbean	71293
Dominican Republic	Caribbean	9445281
...

Three time bigger

10.

**Some countries have populations more than three times that of all of their neighbours (in the same continent).
Give the countries and continents.**

```
w1.continent
FROM world AS w1
JOIN world AS w2
  ON w1.continent = w2.continent
  AND w1.name != w2.name
GROUP BY w1.name, w1.continent, w1.population
HAVING w1.population > 3 * MAX(w2.population);
```

[Submit SQL](#)[restore default](#)

Correct answer

name	continent
Australia	Oceania
Brazil	South America
Russia	Eurasia
